

ICSE 2013 is the premiere worldwide forum for professionals interested in all aspects of software engineering research. Over 1000 academic, industrial and governmental researchers from dozens of countries – including over a hundred students – attend ICSE. The three-day main conference has multiple tracks reporting on innovative research results as well as on software engineering education and practice. Tutorials, workshops and other collocated events are held before and after the main conference to allow in-depth presentations and discussions of specific topics in software engineering.

Please see the other side for the benefits of being an ICSE 2013 benefactor.
